Notes regarding Set 8 and Set 9.

Many of the questions I heard yesterday involved the connection between inverse points and orthogonal circles. There are some pages in **Chapter 6** that might have been forgotten or not completely absorbed. I suggest that some attention be given to Section **6.3 Orthogonal Circles** and in particular to **Items 84** to **89**.

In **Set 9**, exactly the same ideas come into play, as well as earlier material Items **75, 76** and **77** from **Section 6.1**.
