## PMath 330 Assignment 8

Mark

The following output was generated by S.O.B.B:

$$
\begin{array}{lll}
14(x \cdot y)+(x \cdot z) & =x \cdot(y+z) \\
100(x \cdot y)+(z \cdot x) & =x \cdot(y+z) \\
127 x \cdot(y \cdot(z+x)) & =y \cdot x \\
628 x \cdot(y+(z \cdot(u+x))) & =x \cdot(y+z) \quad \text { [para_from 127.1.1, 14.1.1.2; demod } 100 \text {;flip.1] }
\end{array}
$$

Give the details of how S.O.B.B. found equation 628. (Follow the format in the supplementary page on Critical Pairs and Equational Theorem Proving.)

DETAILS:

## Structures

Fill in the table for the following directed graph:

|  | $a$ | $b$ | $c$ | $d$ |
| :--- | :--- | :--- | :--- | :--- |
| $a$ |  |  |  |  |
| $b$ |  |  |  |  |
| $c$ |  |  |  |  |
| $d$ |  |  |  |  |

Draw the directed graph for the following table:

|  | $a$ | $b$ | $c$ | $d$ |
| :---: | :---: | :---: | :---: | :---: |
| $a$ | 1 | 0 | 1 | 0 |
| $b$ | 0 | 1 | 1 | 0 |
| $c$ | 1 | 0 | 0 | 1 |
| $d$ | 1 | 0 | 1 | 0 |

## C

a

## Herbrand Universe

Suppose that a first-order languge has only a constant symbol $a$, a binary function symbol $f$, and a binary relation symbol $r$.

List the elements of the second level $S_{2}$ of the Herbrand universe:

$$
S_{2}=
$$

List all of the ground clauses that one can make from the symmetry clause $\{\neg r x y, r y x\}$ using just the portion of the Herbrand universe called $S_{1}$.

ANSWER:

## Clauses

Let $\mathbf{S}$ be the structure on $\{0,1,2\}$ with a unary operation defined by $f x=x+1(\bmod 3)$. The relation $<$ is the usual, that is, $0<1<2$. Given the literals

$$
\mathrm{L}_{1}=\neg(f x<y) \quad \mathrm{L}_{2}=x<f y
$$

determine all pairs $(a, b)$ that satisfy the clause $C=\left\{\mathrm{L}_{1}, \mathrm{~L}_{2}\right\}$ in $\mathbf{S}$ by filling in the following:

| $x$ | $y$ | $f x$ | $f y$ | $f x<y$ | $\neg(f x<y)$ | $x<f y$ | C |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 0 | 0 |  |  |  |  |  |  |
| 0 | 1 |  |  |  |  |  |  |
| 0 | 2 |  |  |  |  |  |  |
| 1 | 0 |  |  |  |  |  |  |
| 1 | 1 |  |  |  |  |  |  |
| 1 | 2 |  |  |  |  |  |  |
| 2 | 0 |  |  |  |  |  |  |
| 2 | 1 |  |  |  |  |  |  |
| 2 | 2 |  |  |  |  |  |  |

## Does $\mathbf{S}$ satisfy the clause $\mathbf{C}$ ?

Opp-unification: Suppose our first-order language has a unary relation symbol $r$ and a binary operation symbol $g$. Show that the two clauses $\{r g x g y x, r g g y z w\}$ and $\{\neg r g x g g y z w\}$ are opp-unifiable, and find the most general opp-unifier $\left(\sigma_{1}, \sigma_{2}\right)$. [Change $x, y, z, w$ in the second clause to $X, Y, Z, W$.]

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

Thus $\sigma_{1}=\left(\begin{array}{ll}x & \leftarrow \\ y & \leftarrow \\ z & \leftarrow \\ w & \leftarrow\end{array}\right.$
)

$$
\text { and } \quad \sigma_{2}=\left(\begin{array}{cc}
x & \leftarrow \\
y & \leftarrow \\
z & \leftarrow \\
w & \leftarrow
\end{array}\right.
$$

## Resolution Theorem Proving

For $f$ a unary function symbol and $r$ a binary relation symbol fill in the reasons for the following resolution derivation:

$$
\begin{array}{ll}
\text { 1. } & \{r x f x\} \\
\text { 2. } & \{\neg r f 00\} \\
\text { 3. } & \{\neg r x y, r y x\} \\
\text { 4. } & \{r f x x\} \\
\text { 5. } & \}
\end{array}
$$

| given |
| :--- |
| given |
| given |

The following uses ground clauses from the given clauses $1-3$ of the previous problem. Identify the source of each ground clause (e.g., clause 3) that is a ground instance of one of the above given clauses, and give reasons (i.e., line numbers) for the resolution steps:

1. $\{r 0 f 0\}$
2. $\{\neg r 0 f 0, r f 00\}$
3. $\{\neg r f 00\}$
4. $\{\neg r 0 f 0\}$
5. $\}$
