

### MEASURING: Ranking Student Performance

A common form of assessment in academic subjects, and in some other test situations, is by means of *marks*. Three forms of the *same* (hypothetical) data for 12 students in 8 subjects are given below to illustrate matters of statistical interest. Eleven entries in the last column of each table have been omitted for the reader to fill in by adding the relevant eight numbers for each student; check your arithmetic by calculating the average, range and s.d. of the first two sets of 12 totals.

	Art	Biol.	Chem.	Drama	Eng.	French	Geog.	Hist.	Total	
<b>M A R K S</b>	Ann	100	72	47	75	40	30	30	47	
	Bob	90	60	70	65	20	48	38	43	
	Clair	61	45	80	55	41	62	36	40	
	Don	63	90	35	70	30	47	32	51	
	Elise	54	82	41	40	45	49	55	41	
	Frank	80	63	20	45	65	38	45	49	<b>405</b>
	Gail	23	55	60	80	60	32	47	45	
	Henry	40	70	65	20	56	60	35	52	
	Iris	85	40	30	51	28	55	40	60	
	Jim	72	10	75	35	25	66	54	50	
	Kate	48	34	10	60	70	36	57	55	
	Len	10	20	58	30	35	70	60	59	
<i>Average</i>	<i>60</i>	<i>53</i>	<i>49</i>	<i>52</i>	<i>43</i>	<i>49</i>	<i>44</i>	<i>49</i>	<i>401</i>

	Kate	9	10	12	5	1	10	2	3	
	Len	12	11	6	11	8	1	1	2	

- If the Question requires ranking the students based on the three versions of their marks, what Answers would you give?
- How do you account for your three *different* Answers?
- Suggest an *actual* situation to which the ambiguity illustrated by these data is relevant.
- Could the ambiguity be reduced or eliminated in the situation you describe? Explain briefly.
- Describe briefly what the data given overleaf on page HL41.1 indicate about the relationships among:
- the *averages* of the 8 courses and the average of the totals;
  - the *ranges* of the 8 courses and the range of the totals;
  - the *s.d.s* of the 8 courses and the s.d. of the totals;
  - the *ranges* and *s.d.s* of the 8 courses and the totals.

What are the implications of these relationships for the use of averages, ranges and s.d.s as numerical data summaries?
